

ACCELERATE CLINICAL DOCUMENT CAPTURE

eCopy ShareScan for Healthcare

Increase productivity, reduce costs, and improve the quality of care with distributed capture

CHALLENGE:

Healthcare organizations face significant challenges in delivering high-quality, accountable care, because much of the information needed to provide that care remains locked in paper form. These are just some of the problems organizations face in handling high volumes of paper:

- Centralized scanning processes can result in significant delays before documents are made available in the EHR.
- Scanned records are often saved as simple tiff files and therefore cannot be quickly retrieved through a keyword search.
- Distributed capture platforms can be difficult to standardize, and often result in breaks in HIM scanning protocols.

SOLUTION:

eCopy ShareScan is a cost-effective, easy-to-deploy solution designed to accelerate capture using the MFPs (multi-function peripherals) and scanners you already own. eCopy ShareScan for Healthcare turns network scanners and MFPs into secure “on-ramps” to EHRs, accelerating access to patient data and making the patient record more complete.

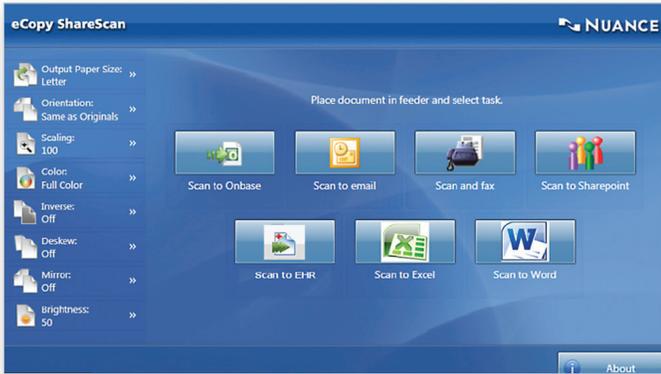

eCopy ShareScan compliments centralized scanning operations and simplifies distributed capture workflows, while at the same time ensuring adherence to HIM scanning protocols.

KEY BENEFITS:

- Simplified point-of-care scanning to complement centralized operations
- Access to patient records in minutes instead of days
- Standardized interface across capture devices to support HIM scanning protocols
- Increased productivity with easy-to-find, logically named, searchable files

KEY FEATURES:

- Simplified EHR integration through IHE profiles, HL7, and custom interfaces
- Batch processing with barcodes and coversheets
- Dynamic patient and document type look-ups for accurate indexing
- Integration with popular ECM, fax server, and business applications

eCopy ShareScan collapses multi-step scanning workflows into a few simple button presses on a network scanner or MFP.

With an interface that is as easy to use as your smart phone documents are scanned, indexed, named, and attached to the correct patient record in the EHR.

IMPROVED CARE WITH ACCELERATED ACCESS TO PATIENT INFORMATION

Centralized operations can be costly and may create delays in making documents available in the EHR. eCopy ShareScan complements centralized operations by turning scanners and MFPs across the facility into secure “on-ramps” to HIM workflows and EHR. This accelerates access to patient data and provides clinicians with a more complete picture of the patient record.

STANDARDIZED CAPTURE TO REDUCE COSTS AND SUPPORT HIM PROTOCOLS

eCopy ShareScan’s intuitive user interface reduces training costs and allows HIM departments to shift the scanning of time sensitive documents from centralized operations to the existing scanners and MFPs closer to the point of care. With support for dynamic look-ups for data values in the EHR eCopy ShareScan can help ensure easy and accurate indexing of scanned records. Barcodes and coversheets can also be used to support batch processing of patient records.

ENHANCED PRODUCTIVITY AND PHYSICIAN SATISFACTION

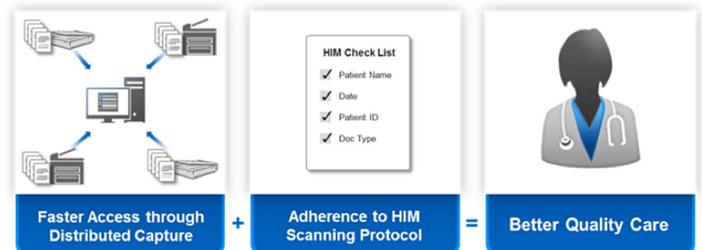

A common frustration for clinicians is the time wasted trying to find the needed document among many poorly named static image files attached to a patient record. eCopy ShareScan improves physician productivity and satisfaction by creating easy-to-find, logically named, searchable PDF/A files.

SIMPLIFIED EHR INTEGRATION

eCopy ShareScan offers a variety of integration options to ensure robust scanning workflows into today’s EHRs. From industry standard IHE profiles to customized solutions for the most popular EHR platforms—eCopy ShareScan can meet your integration needs. eCopy ShareScan can also create “intelligent documents” using the HL7 CDA format to support interoperability and information exchange between systems and providers.

A FLEXIBLE SOLUTION TO MEET ALL OF YOUR CAPTURE NEEDS

As the world’s best-selling document scanning and workflow solution for MFPs, eCopy ShareScan provides everything needed to automate paper-to-digital workflows easily and securely. With additional connectors and extenders for leading ECM, fax server, and other popular business applications, eCopy ShareScan can help healthcare organizations improve document capture processes and workflows across all departments and business units.

ShareScan provides “Continuity of Capture” by standardizing the scanning processes across all devices to ensure records are captured and indexed in accordance with HIM protocols.

ABOUT NUANCE HEALTHCARE

Nuance Communications is the market leader in creating clinical understanding solutions that drive smart, efficient decisions across healthcare. As the largest clinical documentation provider in the U.S., Nuance provides intelligent systems and services that improve the entire clinical documentation process—from the capture of the complete patient record to clinical documentation improvement, coding, compliance and appropriate reimbursement. More than 450,000 physicians and 10,000 healthcare facilities worldwide leverage Nuance’s award-winning, voice-enabled clinical documentation and analytics solutions to support the physician in any clinical workflow and on any device.

To learn how Nuance can help you meet your healthcare challenges, please visit www.nuance.com or contact your Nuance sales representative today.
