

Equitrac embedded for Kyocera MFPs.

Fully integrated with Nuance Equitrac® Office and Equitrac® Express, and available for a wide range of Kyocera® multifunction products (MFP), Equitrac Embedded for Kyocera provides maximum printing convenience, ease of use and output security from the control panel of supported Kyocera MFPs. It lower print costs by supporting control, convenience and choice and lets users just print while letting IT get back to running the business.

Complete control and efficiency

Control of MFP activity starts with user authentication, and with Equitrac Embedded, administrators can easily control user access to MFPs at the function level. The software makes use of existing authentication systems (such as Active Directory, LDAP or the Equitrac Office or Equitrac Express accounts database) to validate

user credentials. To unlock the system, users simply enter a PIN code or network user ID/password directly on the MFP display. Users can also identify themselves with an ID card using optional magnetic card and contactless smart card readers. After authentication is complete, copy, print, scan or fax job functions are available, depending on defined MFP user access privileges.

Make every MFP a personal device

Equitrac Embedded transforms Kyocera MFPs into secure personal printers, reducing the risk of confidential data falling into the wrong hands. After a user authenticates at a device, Equitrac Embedded displays that user's print jobs, including document properties and costs, on the embedded interface. From this screen, the user can release one or more of their print jobs, or delete jobs.

Control

- Authorize all users and establish permission-based access to MFP features
- Supports existing authentication systems and processes
- Capture all MFP job attributes on a page-by-page basis and apply variable rates based on document features

Convenience

- Familiar touch-screen experience on Kyocera MFPs
- Submit jobs to a single print queue and release at any device
- Let users roam throughout the organization without worrying about printer drivers and configuration

Choice

- Deploy server-based, I-Queue or a hybrid printing model with the convenience of a single application
 - Encourage responsible behavior through cost preview and options to delete unwanted jobs
 - Manage users, billing codes and quotas from the client-based or Web-based System Manager
-

Equitrac Embedded for Kyocera supports multiple authentication techniques, including PIN, network ID/password and ID cards.

Press to release
Simply press PRINT to output selected documents.

Eliminate waste
Delete unneeded documents before printing.

Print anywhere
Enjoy complete mobility by accessing documents waiting on any print server.

Review documents
Review document content prior to printing.

Equitrac Embedded for Kyocera MFPs turns shared output devices into personal printers, providing users with the control, convenience and choice they need to print more efficiently and make smarter print decisions. Paired with Equitrac Office or Equitrac Express software, all MFP activity is centrally tracked and managed for complete organizational control over costs and security.

Thanks to Equitrac's Secure Document Release technology—and the flexibility to use server-based printing or I-Queue™—users can move among various floors, buildings and other locations and still print from any connected MFP, collecting their output at any time, from anywhere. Users can also avoid devices that are busy or out of service.

Track and reduce output costs
Information about every transaction is sent to the Equitrac Office or Equitrac Express Server for centralized accounting and activity reporting. These reports make it easy to recognize opportunities to reduce costs, minimize waste and optimize device deployment.

Simplify and centralize print management
With Equitrac Embedded, the Kyocera MFP becomes the hub of an adaptive infrastructure for secure and mobile print release, accurate cost management, and broad-based device management throughout the organization. Since it is built on Kyocera's customizable development platform, there is no need to install external hardware.
